REAL MONEY 101

Credit | Banking | Investing | Student Loans

Make wise decisions about your fiscal future

HESAA
HIGHER EDUCATION STUDENT ASSISTANCE AUTHORITY
Dear New Jersey Student,

Earning a postsecondary education is an increasingly important element of success. By completing a high-quality postsecondary program, you will not only expand your knowledge, skills, and abilities, but also improve your chances of achieving long-term financial rewards by entering the workforce with the credentials that are valued highly by employers in today’s economy.

The Higher Education Student Assistance Authority (HESAA) is committed to providing students and families with the tools and resources needed to thrive here in New Jersey – and throughout life. This booklet, Real Money 101, was designed with you in mind. You can refer to this resource throughout your educational and working career, as you choose options to pay for higher education and as you make other major financial decisions. Now is an ideal time for you to learn about credit, banking, investing, and student loans.

For more information, please call HESAA at (609) 588-3300, ext. 1403. Our team of professionals is available to support you and your family in making higher education an attainable goal.

All the best,

David J. Socolow

Executive Director

Money Management

Good financial habits don’t start after you leave school. They begin now. During school, you can develop the necessary skills that will assist you with money management throughout your life. Before we get started, answer these twelve questions to learn if you control your money, or your money controls you. Be honest with your answers, and check below to see how you score.

Debt Management Quiz
1. A couple of days after taking money out of an ATM, I have no idea where my money went.
   Yes/No

2. I only make the minimum payments on my credit cards each month.
   Yes/No

3. I often buy things on impulse, figuring “you only live once.”
   Yes/No

4. I never think about reducing spending, even if I’m having problems paying my bills.
   Yes/No

5. Putting money into a savings account is something I can worry about later.
   Yes/No

6. I don’t have a checking account, or if I do, I never bother to reconcile my checkbook when I get my statements.
   Yes/No

7. I’m too young to think about investing. There’s time for that.
   Yes/No

8. I have never seen or requested my credit report.
   Yes/No

9. No one looks through my trash for my personal or financial information, so I never shred any documents.
   Yes/No

10. I don’t have a plan to reach my financial goals.
    Yes/No

11. I don’t keep a file or record of pay stubs, bank statements, receipts, ATM transactions, etc.
    Yes/No

12. When filling out a student loan application, it’s always best to ask for the maximum amount available, even if I don’t really need it.
    Yes/No

If you answered YES to 0-2 questions, you’re on the right path to controlling your money.

If you answered YES to 3-5 questions, you need to seriously re-evaluate your spending and saving habits.

If you answered YES to 6-11 questions; STOP and TAKE A DEEP BREATHE. You may need help from a credit counselor or financial planner to avoid financial disaster.

If you answered YES to all 12 questions, your need for help is urgent.
Why Budget?
A budget is the most fundamental and effective financial management tool available.

Whether you earn thousands of dollars a year or hundreds of thousands, it’s extremely important to know how much money you have to spend and where it is going.

A budget is the first and most important step toward maximizing the power of your money.

Needs, Wants and Goals
Your money should cover:
• Needs
• Wants
• Short-term goals
• Mid-term goals
• Long-term goals

Needs, essential for survival, are things you cannot live without. They also include payments that you must make. Wants are things that you can live without, but you get them because you want them. Goals are things you want in the future. Your money should cover all your needs before your wants.

The chart to the right lists samples of needs, wants and goals.

How To Budget Your Money In School And Beyond
Developing a budget will help you manage your finances and assist you in reaching your financial goals. To get started, figure out where your money goes. The first step is to keep track of all your spending for one month (ideally three months or more). Your expenses should include money you spend; money you save; money you invest; and money you give away. Write down all expenses including purchases as minor as a cup of coffee. At the end of the month you will be able to accurately assess where your money is being spent.

The next step is to figure out your income. To correspond with step one, calculate your monthly income. Don’t forget to use your net income, money left after all deductions have been taken out, because this is the money you will actually have available to you.
Money Management

Federal Taxes
If you have a job that pays you then you are almost certainly already paying taxes to the federal and state government (a possible exception might be if you are an independent contractor in which case you are responsible for siphoning out the taxes when filing).

The United States federal government uses a progressive tax system, which means that the more money you make, the higher your effective tax rate is (determined by tax brackets). Typically, employers will provide you with a W-2, which includes information on how much you were paid and what has already been deducted in taxes.

Who has to file Guide:
So if this is the case (for most) then why do we have to file taxes?

Payroll withholding is not always correct depending on how one set it up. As a result without filing, one can either over or under pay taxes. Your return for the tax year is due on April 15 (sometimes a few days later depending on what day it falls on) of the following year. For instance, your tax return for 2017 would have been due on April 17, 2018.

There are three main ways to file:
1. Manually with a form called a 1040, 1040A or 1040EZ
2. Through a software program like TurboTax
3. Through a professional accountant or CPA

The amount of your income that’s actually taxable can be reduced by what’s known as deductions. For instance, if you gave $2,000 to qualifying charities in 2017, you could have deducted that when you filed taxes in the spring of 2018. Tax filers may choose to itemize or take the standard deduction set by the IRS, which is usually going to be higher.

So what taxes are withheld? The big one is the federal income tax. It is your employer’s responsibility to withhold this money based on the information reported on your W-4 form. The next one is FICA, which stands for Federal Insurance Contributions Act. This goes to Social Security and Medicare, which are programs that you will have access to when you are a senior. This is how one pays into the system.
FICA contributions are shared between the employee and the employer.

Federal income tax and FICA are mandatory, however, those are not the only items deducted from your paycheck. If you pay any amount towards your employer – sponsored health insurance coverage then that will also be deducted not to mention any sort of flexible spending account to assist with medical expenses will be deducted as well.

Retirement contributions can be made either pre or post – tax depending on your situation.

Need help with State Taxes part

**New Jersey State Taxes**

New Jersey has six marginal tax brackets, ranging from 1.4% to 8.97%. They are the same, unlike the Federal income tax brackets, for single, married filing jointly and head of household.

Technically, you don’t just have one “tax bracket” – you pay all of the New Jersey marginal tax rates from the lowest tax bracket to the tax bracket in which you earned your last dollar.

For sales made on and after January 1, 2018 the rate is 6.625%. The average effective property rate in New Jersey is 2.4%, compared with a national average of 1.19%. To calculate the exact amount of property tax you will owe requires your property’s assessed value and the property tax rates based on your property’s address. So for example, if your home is deemed to be worth $200,000 and your local tax rate is 1.5%, your property taxes would be $3,000 annually (or $250 each month).

Some properties, such as those owned by religious organizations or governments are exempt from paying property taxes. Others can qualify for an exemption on part of their homes. New Jersey does not charge sales tax on unprepared food, household paper products, medicine and clothing aside from fur.

To view the current NJ tax brackets go to: www.tax-brackets.org/newjerseytaxtable
Money Management

Wages among college students can vary. The hours you work may differ from week to week, your income may include tips, or you may be paid on commission. If this is the case, the best way to evaluate your income is to figure out your average and use this number to calculate your budget.

As college students, you may have other sources of income such as:

- Financial aid refund
- Child support payments
- Public assistance
- Unemployment insurance
- Gifts or bonuses

However, these sources of income may not be issued on a monthly basis. For example, if you are a financial aid recipient, your refund normally occurs at the beginning of each semester. Due to the fact that funds from these sources may not be available on a monthly basis, resist the temptation to spend your refund all at once. Incorporate these funds into your monthly budget. The sum of all these sources, plus your wages, make up your monthly income.

Expenses can be divided into three categories.

<table>
<thead>
<tr>
<th>Fixed</th>
<th>Expenses that do not change from month to month.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Rent/Mortgage</td>
</tr>
<tr>
<td></td>
<td>• Car payments</td>
</tr>
<tr>
<td></td>
<td>• Insurance</td>
</tr>
<tr>
<td></td>
<td>• Loan payments</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Variable</th>
<th>Expenses that change from month to month.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Groceries</td>
</tr>
<tr>
<td></td>
<td>• Utilities*</td>
</tr>
<tr>
<td></td>
<td>• Gas</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Periodic</th>
<th>Expenses that do not occur every month.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Gifts</td>
</tr>
<tr>
<td></td>
<td>• Vacations</td>
</tr>
<tr>
<td></td>
<td>• Clothing</td>
</tr>
</tbody>
</table>

* Depending on how your household pays utilities (ie..payment plans), they could either be fixed, variable, or periodic.

Now that you have all the components of a budget, you must determine if your income exceeds your expenses or vice-versa. If your income exceeds your expenses, you can use part of your excess on wants or goals, such as reducing your debt, purchasing a special item or building your savings.

What do you do if your expenses exceed your income?

You have two choices:
1. Reduce your spending.
2. Increase your income.

Since increasing your income while in school may not be feasible, the best alternative is to reduce your expenses. You may also want to seek professional debt management help from one of New Jersey’s Licensed Consumer Credit Counseling Agencies (for more information visit www.state.nj.us/dobi).

</table>

### Things to think about

- What should be done with the surplus or to prevent a surplus in the first budget example?
- What can be done to prevent the deficit in the second example budget?
Banks are both a convenient and safe place to temporarily store your money until you either spend or invest it. They aren’t only convenient because you can deposit or withdraw funds from your account at the corner ATM at any hour of the day or night, but with the advancement of technology you can now easily track your account online. Banks provide a safe place to store your money because, in many cases, the federal government will insure bank deposits up to $250,000. The Federal Deposit Insurance Corporation (FDIC) is the government agency responsible for insuring banks and helping to maintain a secure and efficient banking system.

Checking Accounts
Checking accounts traditionally are used to pay bills by writing a check or using a debit card. Usually, you place money in your checking account that you do not expect to keep for very long. There are many different types of checking accounts such as Basic Checking, Student Checking Interest Bearing, Joint Checking, and Express Checking. When you want to open a checking account, it is recommended you do some research and see what local bank offers the most valuable deal that suits your needs.

Credit Unions
Anyone can belong to a credit union, just not the same one. It’s about fit. Unlike banks, credit unions are organized by a common bond, whether it’s where you work, worship or live. Credit unions are owned by their members not by stockholders.

According to the Credit Union National Association, 7,351 credit unions existed in the United States in 2011.

Benefits of joining a credit union can include:
- Free educational workshops on saving, reducing debt, investing, etc.
- Credit unions tend to have a stronger relationship with their customers
- Low or no minimum balance checking and typically FREE checking
- Often lower fees and higher yields

Possible downsides of a credit union:
- May or may not have less technology than banks
- Fewer branches for in-person transactions but usually have “shared” branching*
- Not all are alike so one still needs to read the fine print on all credit union products

* Shared branching is a national network of credit unions from all over the country that share facilities to give members thousands of convenient locations to perform transactions just as if they were at their home credit union.

### How To Cash A Check

Before cashing a check made out to you, sign your name on the back. Your signature must appear within 1-1/2 inches of the top. You can also write “For Deposit Only” and your account number above your signature. This ensures that the money goes into your bank account.
Maintaining And Reconciling A Checkbook Register (whether online or manually)
It’s important to keep track of your checking account. Record all of your checks, withdrawals, charges and deposits. However, that is only part of the responsibility of having a checking account. When you receive your bank statement, you should balance your checkbook. This ensures your records correspond with the bank’s record of your account.

Online Banking
Fifty-one percent of U.S. adults, or 61% of internet users, bank online. Thirty-two percent of U.S. adults, or 35% of cell phone owners, bank using their mobile phones.

Key Considerations For Selecting An Online Bank Or Credit Union
1. Products and Services – can you purchase things like CD’s, Money Markets and other saving vehicles through the online service?

2. Customer Service – how easy is it to get questions answered?

3. Safety & Security – do you trust the online security?

4. Perks and rewards – does the bank offer these and are they redeemable or usable online?

5. Can I pay bills, view transactions, filter, view check images and pending purchases, check balances or transfer between accounts?
Financial Investments

Investing means putting your money where you think it will earn a profit. Before you begin investing however, you should have a sound budget and savings plan. We suggest that you consult several resources before investing such as financial magazines, newspapers, or television and radio shows on money management. Also, talk to others who have made similar investments. Obtaining information from state and regulatory agencies, stockbrokers, insurance agents, and financial planners is also a good idea.

Types Of Savings Accounts

<table>
<thead>
<tr>
<th>Description</th>
<th>Regular Savings Accounts (Deposit Accounts)</th>
<th>Certificates of Deposit (CD’s)</th>

## Types Of Investments

| Annuities | • Can be purchased directly from electronic payroll deduction.  
  • Tax Deferred Annuity is a contract between you and an insurance company for a guaranteed interest-bearing policy with guaranteed income options.  
  • Annuity pays you regularly in the future.  
  • Most often pays off during retirement.  
  • Often nontaxable until payments begin.  
  • Low risk, generally high fees associated with these adjustments. |
| --- | --- |
| Mutual Funds | • Funds are a group of stocks, bonds, and other investments managed by investment experts.  
  • Each investor buys shares in the fund.  
  • Funds regularly pay profits to investors.  
  • Investors can sell shares to make a profit, but may lose money if value has decreased.  
  • Levels of risk and return vary. |
| Bonds | • Investor loans money to government or corporation that issues the bond.  
  • Bonds take 5 to 20 years to mature.  
  • Low to moderate risk. |
| Stocks | • Investor buys shares from a broker or from an electronic broker.  
  • Stocks rise in value when corporation does well. Stocks may also decrease in value.  
  • Success requires knowledge of the stock market and the business issuing the shares  
  • Risk varies. |
| Real Estate | • Investor may make money by buying property and renting it out.  
  • Investor may make money by buying property and selling it for a profit.  
  • Moderate to high risk. |
| **NJ Best 529 Savings Plan** | A 529 Plan is an education savings plan operated by a state or educational institution designed to help families prepare for future college costs. It is named after Section 529 of the Internal Revenue Code which created these types of savings plans in 1996. Nearly every state now has at least one 529 plan available. It’s up to each state to decide whether it will offer a 529 plan (possibly more than one) and what it will look like. In other words, 529 plans can differ from state to state. Be sure to research the features and benefits of the 529 plan and compare the various state 529 plans prior to investing.  
For more information on New Jersey’s premiere 529 Savings Plan, please visit www.njbest.com |
| Financial Planners | • Some may charge a fee. (They present more options.)  
  • Some work on commission. (They may try harder to sell you particular investments.) |
More on Investing & Saving
College students and recent graduates face particular challenges in saving and planning for retirement. Saving early and capitalizing on years of compounding interest is key to retiring comfortably. The most important thing to remember is that you will retire someday. Younger students should be more focused on building up a cash reserve than putting money in a retirement account. This will provide them with an emergency fund, which can be used for incidental expenses or as a savings account for an eventual down payment on a home.

Social Security is another component of retirement that students should become familiar with early on. Social Security payments are based on the average of the 35 years when you have the most reported earnings. Current students can expect to claim full Social Security benefits at age 67, although partial benefits become available at age 62. Social Security, however, will not ensure a comfortable retirement by itself.

Company–provided 401(k) plans often have the benefit of a company match, which can increase retirement funds dramatically over time. For those who don’t have access to a 401(k), an individual retirement account (IRA) allows savers to take advantage of compound interest. Savers have the option of a traditional IRA, in which contributions aren’t taxed until you withdraw them during retirement, or a Roth IRA, in which funds are taxed before being added to your savings, but the withdrawals are not taxed. The Roth IRA is a particularly advantageous option for young savers who are likely in a lower tax bracket than they will be upon retirement (see page 4 and 5 for more information on tax brackets).

Determining your investment approach - or in other words, discovering what type of investor you are - can help you choose the right investment mix. There are multiple factors to consider, including your time horizon, risk tolerance, and financial situation.

Investments over time: The chart on the following page depicts four different investment types. The returns on stocks can fluctuate greatly over time. Yet, historically, stocks have outperformed bonds and short-term investments and have greatly offset the effects of inflation. The longer you have to invest, the better equipped you are to ride out short-term fluctuations in the stock market, and the more aggressive your investment strategy can be. But if you’re nearing retirement, you may need more of the security that bonds and short-term investments can bring.

Your risk tolerance: Before deciding on your risk tolerance level, there are two types of risk to think about: the risk that an investment will not generate the return you’d hoped for (investment risk), and the risk that inflation will eat away at the value of your savings (inflation risk). Stocks tend to involve greater investment risk and less inflation risk. Bonds and short-term investments offer less investment risk, but greater inflation risk. Ultimately, your comfort level with each type of risk will help determine which investment mix is right for you.
No two people are alike, which is why you need to identify your unique financial situation. Understanding both your short and long-term financial needs will help you choose the best approach to help you meet your goals.

Where do you fit along the spectrum of investment approaches?

- Shorter time horizon
- Lower risk tolerance
- Financially unstable
- Longer time horizon
- Higher risk tolerance
- Financially stable

To sum it up, the higher your risk tolerance and the longer your time frame, the more weight you may want to give to stocks. On the other hand, the lower your risk tolerance and the shorter your time frame, the more you may want to rely on bonds and short term investments.

This chart shows how four hypothetical investment mixes align with different approaches to investing from conservative to aggressive.

![Financial Investments Diagram]
Mutual Fund
Here’s what mutual fund investing can mean to you. Today, more than 50% of all U.S. households invest in mutual funds.

When you invest in them, you will enjoy all these advantages:

1. Diversification* can help reduce your risk. Mutual funds are a great way to avoid “putting all your eggs in one basket.” As a mutual fund investor, you own shares in a portfolio made up of as many as several hundred different securities – far more than you could ever hope to invest in as an individual.

2. Professionals, who manage your dollars. When you invest in a mutual fund, you’re actually hiring full-time investment professionals. On your behalf, these professionals pursue the best possible performance for a mutual fund – devoting their careers to buying and selling securities for fund investors like you.

3. Easy access to your money. On any business day, you can redeem your shares for cash, which may be more or less than the original price you paid per share.

4. More ways to adapt to your changing needs.** You can easily exchange shares of one fund for shares of another to adapt to changes in your personal financial goals or market conditions.

5. The option to reinvest your earnings automatically. An easy way to build the number of your shares is to reinvest your earnings automatically.

Rule of 72
The “Rule of 72” is a mathematical guide that can help you calculate when money will double at a given interest rate. It’s called the “Rule of 72” because at 10%, money will double every 7.2 years. To use this Rule, simply divide the interest rate into 72. It is important to note that this “Rule of 72” is intended as an educational and planning tool and as such should not be construed as investment advice.

Example:
So if you deposit $3,000 into an account with a 2% interest rate, 72 ÷ 2 is 36. So in 36 years you will have $6,000.

* Diversification does not assure a profit or protect against loss.
** This ability to exchange may be modified or discontinued at any time.
Financial Investments

Protect Against Inflation and Taxes
Every successful financial plan includes a strategy to reduce the impact of inflation and taxes. If your investments earn less after taxes than the rate of inflation, your purchasing power will decrease over time. History has shown that equity investments (such as stocks) are the best hedge against inflation because of their potential for higher returns. Of course, equity investments are also subject to greater risk than other types of investments. An IRA is a great way to save on current taxes and to shelter investment growth and income from annual taxation until your money is withdrawn.***

Definitions

Inflation
Inflation is the rate at which the general level of prices for goods and services is rising and, subsequently, purchasing power is falling. Central banks attempt to stop severe inflation, along with severe deflation, in an attempt to keep the excessive growth of prices to a minimum.

Deflation
Deflation is a general decline in prices, often caused by a reduction in the supply of money or credit. Deflation can be caused also by a decrease in government, personal or investment spending. The opposite of inflation, deflation has the side effect of increased unemployment since there is a lower level of demand in the economy, which can lead to an economic depression. Central banks attempt to stop severe deflation, along with severe inflation, in an attempt to keep the excessive drop in prices to a minimum.

Investment Strategies

Stay Focused
Establish your time horizon for investing and stick to it. Avoid getting caught up in the day-to-day shifts in market performance and your funds’ share prices. For longer-term investments, use time as a valuable ally and learn to look past short-term fluctuations.

Diversify
A mutual fund offers investors the opportunity to pool their money to own shares in a portfolio of dozens, or even hundreds of securities. But there’s more to diversification than simply investing in one mutual fund. The best type of diversification occurs when you spread your investments across a mix of “asset classes,” or financial markets, such as equities, bonds and money market securities. This strategy, called “asset allocation,” can help you capture the combined performance of several markets and smooth out downturns in any single market.†

Your financial advisor can assist you in properly diversifying your portfolio and can help explain the broad array of choices.

***Distributions of deductible contributions and earnings from Traditional, SEP, and Simple IRAs are subject to income tax when withdrawn and may be subject to a 10% penalty if the withdrawal is made before the age of 59 1/2.

† Diversification does not assure a profit or protect against loss.
Rely On the Experience of Professionals
In a specialized world, investing can seem complicated. That’s why your funds should have a dedicated team of professionals working behind the scenes for you. Source: MTB Funds

Selecting a Financial Advisor
10 Questions to Ask:

1. Are you registered as an investment advisor?
   If yes, then the advisor owes you a fiduciary duty, which is a fancy way of saying that they must put your needs first. Investment professionals who aren’t fiduciaries are held to a lesser standard, called “suitability,” which means that anything they sell you has to be appropriate for you, though not necessarily in your best interest. If the advisor is registered, ask for a copy of their Form-ADV and Form-ADV Part II.

2. How will I pay for your services?
   The advisor should clearly state in writing how they will be paid for the services provided. The three basic methods of payment are: Fees based on an hourly or flat rate; fees based on a percentage of your portfolio value, often called “Assets Under Management” (“AUM”); and commissions paid per transaction. How often you expect to trade, and whether you want your money pro-actively managed, will help determine which model works best for you.

   Planners who earn money based on commission rather than a flat or asset-based rate could have an incentive to steer you in a particular direction. When considering how you will actually buy or sell, you should determine whether you need a salesperson or an advice-giver.

   If you need a way to buy and sell securities, then you can open an online account with a discount brokerage firm (often the cheapest option), where you will not receive any advice.

3. What experience do you have?
   If you want a money manager who will make investment decisions for you, based on your investor profile and risk tolerance, then you are likely to pay via AUM. But fee-based advisors aren’t perfect. Advisors earning 1 percent of your assets might be disinclined to encourage you to liquidate your investments, even if that’s the right move, because their fee would shrink as a result of that advice. Find out how long the advisor has been in practice and where. Also ask if they have any professional certifications,

   licenses or designations, such as a Certified Financial Planner (CFP), a Certified Public Accountant - Personal Financial Specialist (CPA-PFS), or Chartered Financial Consultant (ChFC). While these are signals of credibility, they don’t guarantee a successful relationship.

4. What other services do you offer?
   The services offered can depend on a number of factors including credentials, licenses and areas of expertise. Some offer advice on a range of topics, but do not sell financial products. Others may provide advice only in specific areas such as estate planning or tax matters.

5. What is your approach to financial planning and investing?
   Some advisors prefer to develop a holistic plan that brings together all of your financial goals. Others provide
advice on specific areas, as needed. Make sure the advisor’s viewpoint on investing is neither too cautious nor overly aggressive for your risk tolerance. Also ask whether the planner makes investment decisions alone, or depends on others in the firm to do so. What was the advisor’s performance in both good and bad markets and ask yourself whether it’s more important to you to make money in a rising market or prevent losses in a down market. A great follow up question: What were the three worst investment decisions you made over the past five years, and how did you correct them?

6. Can you provide three references?
Ask for two current clients whose goals and finances match your own, as well as a professional reference, like an accountant or estate attorney.

7. Do you have a financial interest in the entity that houses my account?
When interviewing advisors not associated with large brokerage or insurance companies, ask if they use an independent third-party custodian or clearing firm (this is the entity that produces your statements), which prevents the advisor from having direct custody of your assets and adds another level of security for your account. In the Madoff example, he was the investment advisor, broker-dealer, clearing agent and custodian for all of his client accounts -- a big red flag.

8. How often will we interact?
What should you expect in terms of frequency of verbal, written and in-person communication? Also ask whether the advisor will remain your primary contact.

9. Is there anything in your regulatory record that I should know about?
Part of your research should include conducting background checks on the professional you may hire. You can visit the Securities & Exchange Commission and FINRA websites or the State Securities website NASAA as well as the CFP (Certified Financial Planner) Board. While some violations are non-starters (settlement of multiple customer complaints), others may be understandable (marketing materials not pre-approved; non-client or non-investment violations).

10. Do I like this person?
At the end of your meeting, ask yourself the most important gut check question: Do I like this person? After all, you are about to enter into an intimate relationship that will hopefully last a long time. If you have any reservations, move on. There are plenty of qualified advisors out there who would like to help you out.
What Is Identity Theft?
When someone, without lawful authority, knowingly transfers or uses a “means of identification” of another person with the intent to commit, or aid and abet, any unlawful activity that violates federal law, or that constitutes a felony under any state or local law.

Some examples: Identity theft occurs when someone steals another person’s private information to take over their credit accounts, open new ones, take out a loan, rent an apartment, access bank accounts, or commit many other crimes using that person's identity.

How Identity Theft Strikes
When it strikes, the effects can be devastating. What’s more, because it frequently involves no physical theft, identity theft may not be noticed by its victims until significant damage has been done – often, several months and thousands of dollars later.

Some of the ways your personal information can be stolen include:
• Going through your mail or trash, looking for bank and credit card statements, pre-approved credit offers, and tax information.
• Stealing personal information from your wallet or purse such as identification, credit, or bank cards.
• Completing change-of-address forms to redirect your mail.
• Obtaining your credit report by posing as a landlord or someone else who has a lawful right to the information.
• Acquiring personal information you share on unsecured sites on the internet.
• Buying personal information about you from an inside source – for example, a store employee that gets your information from a credit application or by “skimming” your credit card information when you make a purchase.
• Getting your personnel records at work.

Identity thieves can then use your stolen information in the following ways:
• Opening new credit card accounts using your name, date of birth, and Social Security number. When they use the credit cards and don’t pay the bills, the delinquency is reported on your credit report.
• Establishing phone or cellular service in your name.
• Opening a bank account in your name and writing bad checks on the account.
• Counterfeiting checks or debit cards, and draining your bank account.
• Buying cars by taking out auto loans in your name.
• Calling your credit card issuer and, pretending to be you, changing the address on the account. Bills get sent to the new address, so you do not realize there’s a problem until you check your credit report.
• Filing for bankruptcy using your name to avoid paying debts they have incurred under your name.
Computer Security Tips
1. Limit storage of personal information on your computer at home or your business.

2. After you file your taxes using your computer and a third party software like Turbo Tax, print a copy for your records and remove the file from your computer.

3. Password management practices must include strategies for maximum password protection and computer security. Such strategies suggest using unique, easy-to-remember and hard-to-guess passwords.

4. Assign a password to each user of the same computer to limit access to sensitive areas.

5. Avoid taking the computer around to public areas, vacations or business trips. When and if you do, make sure the computer is in your possession at all times. For example, when you take your computer to a café, make sure you have someone you trust watch over your computer if you have to leave the table.

6. Don’t leave the computer in your car.

7. Don’t dispose of your computer without first making sure that all sensitive contents are cleared from the computer.

8. Don’t share your personal computer with others.

9. If you have to use your computer for storing personal and financial information, then avoid using that same computer to connect to the Internet.

10. Install anti-virus software and update it regularly as updates become available. Computer viruses can destroy a computer and its data and worms can lead to information theft and email spoofing.

11. Use a personal firewall on your laptop. Although some operating systems come with a personal firewall, you should use a good third-party personal firewall to secure your computer and prevent intruders from hacking into your system. This software is usually inexpensive and easy to install.

12. Apply patches to the operating systems as they become available. This could be done automatically by certain operating systems.

13. Use software to encrypt your sensitive files and improve your computer security controls, so even if the computer is stolen, the stored information would be useless.

14. Have a plan to prevent laptop theft or loss, protect your mobile device and report its theft or loss when it occurs.

15. Develop, communicate, enforce and monitor a computer security policy for your business and/or your family.

16. Educate your employees, family members, friends, agents, accountants, attorneys and others with whom you do business or allow handling of your sensitive information. Make sure everyone is aware of the identity theft risks and how they can help minimize this threat.

17. Recognize and delete without opening spam emails which are junk, unwanted, or unsolicited emails potentially containing malicious viruses and information.

18. Create and use your online accounts carefully.

19. Phishing is one internet scam which lures victims into giving away their personal information. Don’t fall victim to phishing scams.

20. When accessing the Internet, especially for online banking and bill payment, always use trusted computers such as your office or home computer.
21. Back up your important files on a regular basis to recover them in case they are lost or damaged.

22. Beware of the latest computer malware and your options to protect yourself.

23. Fake websites are increasingly used to steal personal information such as account information and consumers are encouraged to be extra cautious about fake emails and website links.

24. Use of the cloud is more important these days as people store a ton of business and personal information on their cell phones which can be lost or stolen.
Monitor Your Credit Report Closely
Unless you check your credit report frequently, there is often no way to tell if identity thieves have used your personal information to obtain credit accounts or other services in your name.

To help protect yourself from impostors and identity thieves having expanded access to your credit report, there are credit monitoring services that can help you get an early alert to new and suspicious activity on your credit report. The three major credit reporting agencies (TransUnion, Equifax and Experian) all have individual credit monitoring services that can be subscribed to for a monthly fee.

No Credit Card Is Necessary
Credit card fraud is just one type of identity theft. While a thief may use your information to apply for a new credit card, some types of identity theft do not involve credit cards at all.

Someone with a bad credit rating may use your personal information to get a car loan, acquire phone service or another utility service, or open a bank account in your name.

Such cases can be seriously damaging since you may not realize anything is wrong until you notice unfamiliar charges on your monthly bills or statements.

ATM Skimmers
ATM skimmers are usually invisible to users as they blend right into the equipment itself. When a customer inserts his or her card, the account information is read and stored on the device or sent to the criminal’s computer. Moreover, skimmers may also involve a camera that will record the user’s PIN entry. Once all the information is obtained, it is encoded onto bank cards and used to withdraw money from the victim’s accounts.

How ATM Skimmers Work
Figure 1.
The ATM looks normal to the average user but it has a false card slot attached to it.

Figure 2.
It contains an additional card reader to copy your card information and duplicate your card.

Figure 3.
The brochure holder next to the ATM is also false. The side of the box contains a micro camera that is angled to view the keypad.

Figure 4.
The micro camera can view and record as you enter your PIN number through a wireless device up to 200 meters.
Credit
The term “credit” refers to a contractual agreement in which a borrower receives something of value now and promises to repay the debt to the lender at a later date. A person's credit profile typically determines for what purpose, how much and how long, and at what interest rates they will be permitted to borrow. You not only need to manage your money wisely, you also need to manage your credit wisely. Having good credit makes it more likely that you can get financing whenever you want to make a major purchase such as a car or home. Maintaining good credit makes you more attractive as a borrower, which can translate to paying lower interest rates than a person with poor credit.

Credit Cards
Credit cards are attractive because of their convenience. Imagine how difficult it would be to make a hotel reservation or rent a car without a credit card. However, in order to receive a credit card you need to have decent credit.

Selecting a credit card and key terms
When selecting a credit card, you should shop around for the best deal based on your budget and repayment habits. Here are some suggestions that will assist you in selecting a credit card.

• A low annual percentage rate. The lower the rate the less interest you have to pay. Beware of “teaser” rates that increase after a year or less or if you are late in making a payment.

• The interest rate calculation method. This affects how much interest you pay, even when the APR is identical. The standard method of capitalization is once per month.

• Low or no annual fees. If the issuer charges an annual fee, ask them to waive it (develop your negotiating skills).

• Review all other charges such as late payment fees, transaction fees, over the limit fees, etc. These hidden fees can increase your debt substantially.

• A grace period. Not to be confused with a grace period on your federal student loans, this the number of days you have to pay your balance in full before the card issuer starts to charge interest. This normally does not apply if you carry a balance or take a cash advance. Please note: not all credit card issuers will provide a grace period.

• Credit limit. It is a good idea to start small; anywhere from $500 to $1,500 until you are well disciplined enough to handle a higher limit.

• Wide acceptance - a major credit card is convenient and easier to manage.

• Services and features such as cash rebates, frequent flyer miles, extended warranties, etc.

Types of credit
1. Revolving Credit - Consumer credit lines that can be used up to a certain limit or paid down at any time. Credit cards such as Visa or MasterCard are examples of revolving credit.

2. Installment Credit - A loan borrowed for a specific purpose that is repaid with interest in equal periodic payments. Examples of installment credit are home mortgages, car loans, and student loans.

3. Open Credit - Unlimited purchasing power that must be paid in full at the end of the billing cycle. American Express Green card is an example of open credit.
Debt Management

Compare the terms and conditions and decide which card is best for you. If you intend to pay your balance in full each month, a major credit card that has a higher annual percentage rate, but has a grace period and no annual fees would work best. If you plan to carry a monthly balance, look for a low annual percentage rate.

**Importance of Establishing Good Credit**
As mentioned before, having good credit makes an individual more attractive as a borrower, but credit can impact other areas of your life as well. Having poor credit can hinder your job search. Many employers are now checking credit reports as part of their screening process. Also, many landlords check credit before renting out apartments. Finally, some auto insurance companies now check credit. If you have a poor credit history, you will likely pay more for auto insurance than someone with good credit. If your credit is bad, you may not be able to get a job, rent an apartment, or obtain automobile insurance.

**Credit Reports**
A credit report is a detailed record of your credit activity. In essence, it is your report card on how you handle the responsibilities associated with credit. All credit reports contain basically the same information; however, the format will vary from agency to agency. Your Social Security number, date of birth, and employment information are used to identify you. These factors are not used in scoring.

Credit reporting agencies collect and organize information about you and your repayment history and make it available to those who are considering granting you credit. There are three major credit reporting agencies: Experian, Equifax, and TransUnion. It is recommended that you check your credit report at least once per year from each of the three credit bureaus to ensure the information on your report is accurate. This can also help you identify and ward off identity theft.

**Credit Scores**
Since the credit report is a detailed record of your credit activity, your credit scores are your grades on how well you have managed your credit; the higher the score the better. Most lenders rely on credit scores from Fair Isaac’s Corporation (FICO®). FICO® compiles a score from each of the three major credit reporting bureaus. FICO® scores range from 300 to 850, with a median score of 692 in the U.S. Scores above 700 are generally considered to be good credit scores and scores above 760 are considered excellent by most lenders. The higher your credit score, the more likely you will pay a lower interest rate on credit.

<table>

Go to www.AnnualCreditReport.com or call 1-877-322-8228 to obtain a free credit report from all three top credit reporting agencies: Experian • Equifax • TransUnion
Simply paying your bills on time does not guarantee good credit. Too many credit inquiries made by creditors can have a negative effect on your credit score.

Federal Credit CARD Act of 2009

**Credit Card Rules**
- Retroactive rate increases prohibited
- More advance notice of rate hikes
- Fee restrictions
- Restricts marketing & issuance to students
- Ends double-cycle billing
- Fairer payment allocation
- More time to pay
- Gift card protections

**Credit Score Ingredients**
- 35% Payment history
- 30% Amounts owed
- 15% Length of credit history
- 10% New credit
- 10% Types of credit used

**Factors that do not affect your credit score**
There are several factors that are not considered in calculating your credit score. Here are some listed below:

- Your race, religion, national origin, sex, & marital status.
- Where you live.
- Your salary, occupation, title, employer, date employed, or employment history. 
  *Some lenders may consider this information and some of it is used as identifying information.*
- Interest rates currently being charged on credit cards or other accounts.
- Items reported as child/family support obligations or rental agreements.
- Certain types of credit inquiries.
  *Checking your own credit, “consumer inquiries,” does not have an impact on your credit score. Other types of credit inquiries that do not impact your credit score are “promotional inquiries” and “administrative inquiries.” These are requests made by lenders to “preapprove” you for a credit offer or your current lenders making an inquiry to review your account.*

| 1. Which of the following might use credit scores?                     | a. Mortgage lender  
b. Credit card issuer  
c. Home insurer  
d. Cell phone company  
e. Electric utility  
f. Landlord  
g. All of the above |
| 2. On a $20,000, 60-month auto loan, about how much more would a borrower with a low credit score typically pay than a borrower with a good score? | a. Under $1,000  
b. $1,000-$3,000  
c. $3,000-$5,000  
d. More than $5,000 |
| 3. Which of the following does a credit score typically measure?       | a. Knowledge  
b. Attitude toward consumer credit  
c. Amount of consumer debt  
d. Risk of not repaying a loan  
e. Financial resources to pay back loans |
| 4. Which of the following factors are among those used to calculate a credit score? | a. A person’s age  
b. Missed payments  
c. High balances on credit cards  
d. Marital status  
e. State of residence  
f. Personal bankruptcy |

<th>Options</th>
</tr>
</thead>
</table>
| 5. Which group of Americans is most likely to have a credit score?     | a. Those who have borrowed money  
b. Those with a bank account  
c. Those who’ve paid for any financial or utility service  
d. All Americans at least 21 years old |
| 6. Who collects the information on which credit scores are most frequently based? | a. FICO® and VantageScore®  
b. Three main credit bureaus: Equifax, Experian, and TransUnion  
c. Individual lenders  
d. Federal government |
| 7. Who may make a credit score available to an individual consumer?    | a. Three main credit bureaus: Equifax, Experian, & TransUnion  
b. Independent websites  
c. Many individual lenders  
d. All of the above |
| 8. Does each consumer have just ONE generic credit score?              | a. Yes  
b. No |
| 9. What is a good generic credit score?                               | a. 600  
b. 700  
c. 800  
d. 900  
e. It depends on the scoring system |
| 10. Are generic credit scores free?                                   | a. Always  
b. Sometimes  
c. Never |
11. When are lenders who use generic credit scores required to inform borrowers of the credit score used in the lending?

a. After a consumer applies for a mortgage
b. On all credit card, auto & other consumer loans when a consumer doesn’t receive the best terms and/or lowest interest rate available
c. Whenever a consumer is turned down for a loan
d. All of these
e. None of these

12. Which of the following actions helps a consumer raise a low score or maintain a high one?

a. Make all loan payments on time
b. Use a credit card keeping the balance under 25% of the credit limit
c. Avoid opening several credit card accounts at the same time
d. All of the above

13. When will multiple inquiries about getting a mortgage or auto loan or loans from lenders lower one’s FICO or VantageScore® credit score?

a. Each time one makes an inquiry
b. Only when one makes at least five inquiries
c. Never during a 1-2 week window
d. Never

14. How would cosigning a student loan affect one’s credit score?

a. At first, the cosigner’s credit score is likely to decline slightly because their credit score is pulled and an inquiry reported
b. The cosigner’s credit score is likely to improve if the student makes all payments on time
c. The cosigner’s credit score is likely to decline if the student makes one late loan payment
d. All of these
e. None of these

15. How important is it to check the accuracy of your credit reports at the three main credit bureaus?

a. Very important
b. Somewhat important
c. Not very important

16. How often are credit repair companies helpful in correcting any credit report errors and taking other measures to improve one’s credit score?

a. Always
b. Usually
c. Occasionally
d. Never
1. The answer is g: All of the above. Mortgage lenders and credit card issuers may use credit scores to help determine whether you can qualify for credit and what interest rate you’ll pay. In some states, home insurers may use credit scores to help gauge your risk level as a potential customer and to accurately price that risk in your premium. Cell phone companies may use credit scores to help determine which plan you may be eligible for and whether any security deposit is required. Electric utilities may use credit scores as they evaluate whether or not to require a security deposit and the amount of such deposit. Landlords may use credit information and scores to help determine the amount of the deposit that may be required for a particular property.

2. The answer is d: More than $5,000. On a typical auto loan from a bank, a borrower with a low score would likely be charged a higher interest rate and likely pay at least $5,000 more.

3. The answer is d: Risk of not repaying a loan. There are other factors that may influence this risk, but it is the risk itself that a credit score tries to measure.

4. The answers are: b, Missed payments; c, High balances on credit cards; and f, Personal bankruptcy. The greater the severity or number of missed payments, the lower one’s score. Generally, the higher one’s balance is in relation to a card’s credit limit, the lower one’s score. A personal bankruptcy significantly harms one’s credit score and can remain on one’s credit record for up to ten years.

5. The answer is a: Those who have borrowed money. Credit scores are largely based on a borrower’s record of loan payments.

6. The answer is b: Three main credit bureaus. They collect information on the credit use of more than 200 million Americans and make it available in credit reports. FICO® and VantageScore® have developed the most widely used scoring systems for using credit reports to compute credit scores.

7. The answer is d: All of the above. What’s most important to understand is that there are two general types of credit scores — generic scores and lender-specific scores. Generic scores are available to all consumers through the credit bureaus, through FICO®, and through some independent websites. They give consumers an idea of their general credit risk and, thus, whether they should be able to obtain credit and at what interest rate. Lender-specific scores, which may or may not be available to a consumer borrower, are computed by individual lenders who also use them in making decisions whether to extend credit and at what interest rate. Like many individual lenders, some insurers also compute and use their own credit scores for risk assessment.

8. The answer is b: No. Generic scores vary depending on the specific credit report and scoring model used as well as the point in time when the score is computed. It is likely, for example, that if one obtained generic credit scores from several different sources, the scores would all differ at least somewhat.

9. The answer is e: It depends on the scoring system. Higher scores are better under virtually all scoring systems. Scores using the FICO® and VantageScore® 3.0 scales, which range from 300 to 850, are usually considered good if they are over 700. Scores from earlier VantageScore® models, which range from 501 to 990, are usually considered good if they’re over 800. But the most important point is that, when one gets a score, one should look to see where it falls on the scale of that scoring system.

10. The answer is b: Sometimes. The three credit bureaus, FICO®, and various websites sell individual scores, usually for less than $20 each. Some of their websites also offer free scores, often as part of trial periods for fee-based monthly monitoring services. Other websites, including Credit.com, CreditKarma.com, CreditSesame.com and Quizzle.com, offer consumers free credit scores as part of services without fees. Some credit card issuers and credit unions make free credit scores available to select customers and some websites allow consumers to roughly estimate their score by answering questions about their credit use.
11. The answer is d: All of these. Federal law requires mortgage lenders to inform applicants of the generic credit score or scores the lenders use in evaluating their loan applications. As of 2011, it also requires mortgage and consumer lenders who use generic scoring models to set terms for their service to disclose a credit score or scores used to reach that decision when a consumer is not offered the lowest interest rate or best terms available.

12. The answer is d: All of the above. Although it takes much longer to raise a low score than lower a high one. The makeup of each individual’s credit file will impact the amount of change seen in a credit score. For example, someone with a good score may lose up to 30 points when payments are missed on multiple accounts like credit cards and auto loans or possibly more than 100 points when a mortgage payment is missed. However, they may gain only some of these points back by making all mortgage, car, and credit card payments on time for six months.

13. The answer is c: Never during a 1-2 week window. Inquiries during this period are treated as one inquiry by FICO® and VantageScore® credit scoring models, and usually by other scoring models. An inquiry after this window has closed may be considered a second inquiry, which could have a negative impact on a consumer’s credit score. But keep in mind that multiple inquiries rarely lower a consumer’s credit score as much as a missed loan payment.

14. The answer is d: All of these. A student loan account is just like any other cosigned account. Both the applicant’s and the cosigner’s credit scores may be impacted because their credit activities will be reported to the three national credit bureaus. Before the loan is issued, both applicant and cosigner are subject to credit inquiries, which can lower credit scores slightly, and which typically affect scores for just a few months, in the absence of late payments or other negative events. Once the student loan comes due, loan payments are reported to the credit bureaus, and late payments can significantly lower the credit scores of both loan recipient and cosigner.

15. The answer is a: Very important. Lenders may have provided inaccurate information, or failed to add accurate information, about your payment history to your credit reports. Since many consumers have similar names, even accurate information may have been added to the wrong file. Each of the three main credit bureaus — Equifax, Experian, and TransUnion — will provide a free copy of your credit report once a year upon your request - per federal law. An easy way to get each report is to visit www.annualcreditreport.com or call 1-877-322-8228.

16. The answer is c or d: Occasionally or never. Experts disagree whether the correct answer is occasionally or never. But all experts agree that credit repair companies often overpromise, charge high prices, and perform services, such as correcting credit report inaccuracies, that consumers could do themselves by just contacting the lender and the credit bureaus. Federal laws prohibit credit repair companies from charging fees up front, and consumer advocates agree that you should think twice before paying these companies more than several hundred dollars in total.
How to read your credit report

Part of maintaining good credit is to check your credit report at least once per year from each of the three major credit reporting agencies. To request a copy of your credit report from the credit reporting agencies, go to www.annualcreditreport.com.

Once you receive your copy of the credit report, you need to know how to read the information. Make sure you pull the credit report from all three credit bureaus. All three reports will have different information because creditors will supply information to whichever agency they select.

The Personal Identification Information is all the information that uniquely identifies you from someone else with a similar name.

The listings under Public Record include bankruptcies, foreclosures, suits, wage attachments, liens, and judgments. Collection Agency Account Information is information on overdue debt with collection agencies.

Credit Account Information provides a list of all companies that have an open credit account in your name. The account number will be listed (which may be scrambled for security purposes), date opened, date of last activity, credit limit, balance, past due as well as other relevant categories such as the kind of credit (installment, revolving, etc.). If it is just your name on the account, the total amount of the loan, amount owed, status of account (open, paid, closed) will also be listed. Other comments may include internal collection, default, or charged off. Also listed is your previous payment history indicating late payments and account status. The last section is Companies That Requested Your Credit File.
Touchdown!

Student Loans

After you have taken advantage of all other available forms of financial aid, like grants or scholarships, you may need to consider borrowing to cover the remaining college costs. Borrowing money to pay for college is a serious matter, and repayment of that obligation is a major responsibility. The next section will assist you in managing your student loans during and after you leave school.

Basics of Borrowing for College

Educational loans can be a valuable resource for meeting expenses at a college, university or postsecondary institution. You must remember that these are loans that must be repaid with interest. The amount borrowed must be carefully managed. Borrowing now will have an impact on your future lifestyle and ability to support other financial obligations. The first and most important step is to educate yourself about the basic loan programs. Before you sign the promissory note, you should have a clear understanding of various loan programs.

Federal Direct Loans Repayment Options

Standard Repayment
With the standard plan, you will pay a fixed amount each month until your loans are paid in full. Your monthly payments will be at least $50, and you’ll have up to 10 years to repay your loans.

The standard plan is good for you if you can handle higher monthly payments because you’ll repay your loans quicker. Your monthly payment under the standard plan may be higher than it would be under the other plans because your loans will be repaid in the shortest time and you’ll therefore pay the least in interest.

Extended Repayment
To be eligible for the extended plan, you must have more than $30,000 in Direct Loan debt and no outstanding loan balance prior to October 7, 1998. Under the extended plan, you have 25 years for repayment and two payment options: fixed or graduated. Fixed payments are the same amount each month just like the standard plan.

This is a good plan if you will need to make smaller monthly payments. Since the repayment period will be 25 years, your monthly payments will be less than with the standard plan. However, you will pay more in interest because you’re taking longer to repay the loans. Remember that the longer your loans are in repayment, the more interest you will pay.

Graduated Repayment
With this plan, your payments start out low and increase every two years. The length of your repayment period will be up to 10 years. If you expect your income to increase steadily over time, this plan may be right for you. Your monthly payment will never be less than the amount of interest that accrues between payments. Although your monthly payment will gradually increase, no single payment under this plan will be more than three times greater than any other payment.

Income Contingent Repayment (not available for parent PLUS Loans)
This plan gives you the flexibility to meet your Direct Loan obligations without causing undue financial hardship. Each year, your monthly payments will be calculated on the basis of your adjusted gross income (AGI, plus your spouse's income if you’re married), family size, and the total amount of your Direct Loans. The payment is adjustable each year based on your ability to pay. Under the ICR plan you will pay each month the lesser of:

- 20% of your discretionary income
- What you would pay on a repayment plan with a fixed payment over the course of twelve years adjusted according to income

The maximum repayment period is 25 years. If you haven’t fully repaid your loans after 25 years (time spent in deferment or forbearance does not count) under this plan, the unpaid portion will be forgiven. You may, however, have to pay taxes on the amount that is discharged.

Income-Based Repayment
Under this plan, the required monthly payment will be based on your income during any period when you have a partial financial hardship. Your monthly payment may be adjusted annually. The maximum repayment period under this plan may exceed 10 years. If you meet certain requirements over a specified period of time, you may qualify for cancellation of any outstanding balance of your loans.

Income Sensitive Repayment
The following loans are eligible for this repayment plan:

- Direct Loans
- FFELP PLUS Loans
- FFELP Consolidation Loans
Student Loans

Under this plan, your monthly payments

• Increase or decrease based on your annual income
• Are made for a maximum of 10 years

Pay As You Earn Repayment
This plan usually has the lowest monthly payment of the repayment plans that are based on your income. Your payment amount may increase or decrease each year based on your income and family size. To qualify for pay as you earn, you must have a partial financial hardship. You have a partial financial hardship if the monthly amount you would be required to pay on your eligible federal student loans under a 10-year standard repayment plan is higher than the monthly amount under Pay As You Earn. Once you have qualified for Pay As You Earn, you may continue to make payments under the plan even if you no longer have a partial financial hardship. For this purpose, your eligible student loans include Direct Loans, as well as certain types of Federal Family Education Loan (FFEL) Program loans. Although your FFEL loans cannot be repaid under pay as you earn, the following types are counted in determining whether you have a partial financial hardship:

• Subsidized and Unsubsidized Federal Direct Loans
• Federal PLUS Loans made to graduate or professional students
• Federal Consolidation Loans that did not repay any PLUS loans for parents

You also must be a new borrower as of Oct. 1, 2007, and must have received a disbursement of a Direct Loan on or after Oct. 1, 2011. You are a new borrower if you had no outstanding balance on a Direct Loan or FFEL loan as of Oct. 1, 2007, or had no outstanding balance on a Direct Loan or FFEL loan when you received a new loan on or after Oct. 1, 2007.

* Monthly discretionary income equals your AGI minus the poverty level for your state of residence and family size, divided by 12. For the current poverty level, see the Poverty Guidelines Chart, which is issued annually by the U.S. Department of Health and Human Services.

If you have a student loan, get to know
Your rights as a borrower:
• Before you begin to repay your student loan, the holder/servicer of the loan is required to give you a repayment schedule and information about interest rates, fees, outstanding balance, and repayment options.
• You have the right to request a deferment for a defined period after the grace period expires. You must apply and be approved for this deferment.
• You have the right to request a forbearance. Again, you must apply and be approved for this forbearance.
• You may repay your loan, in whole or in part, at any time without penalty.

Your responsibilities:
• You must complete an exit interview session before you leave school or drop below half-time enrollment.
• You must repay your loans, even if you do not complete the academic program, or may be dissatisfied with the education you received, or are unable to find employment after graduation.
• You must notify the holder/servicer of your loan immediately of any changes to your name, address, telephone number, or Social Security Number.
• You must also provide notification if you withdraw from school, drop below half-time enrollment, transfer to another school, fail to enroll, or re-enroll in school for a period which the loan was intended, graduate, or change your expected graduation date.
• You must make your loan payments on time after you leave school, unless a deferment or forbearance was granted.

Tips For Managing Your Student Loan While You Are In School
• Keep copies of all your student loan paperwork in one location.
• Read and act on any letters received from your lender or school. If you are not sure what to do, contact the financial aid office at your school.

• ALWAYS BORROW CONSERVATIVELY. Never borrow more than you need.

Consequences of Defaulting On Your Student Loan
• The entire unpaid balance of your loan and any interest is immediately due and payable.
• Your credit rating will be severely affected, and may make it difficult or impossible to obtain loans, mortgage and credit lines.
• Your wages may be garnished.
• You will incur collection costs, which increase what you owe.
• Your ability to obtain employment may be limited.
• Legal action may be taken against you.
• You will be ineligible for additional state and/or federal student aid.
• Your lottery winnings may be retained to offset the money you owe.
• Your federal and state tax refunds may be withheld through a tax offset. This means that the IRS can take your federal and state tax refunds to collect any of your defaulted student loan debt.
Am I eligible for a loan deferment?
The following table provides situations that may make you eligible for a deferment of your federal student loan.

Loan Consolidation
If you have several different student loan payments and you wish to make just one payment, you may apply for federal loan consolidation. A federal consolidation loan allows students to combine all of the federal loans they received into a single loan payment. When your federal consolidation loan is issued, your new lender pays off the outstanding balance of all the loans you selected to consolidate. Consolidation may help reduce monthly expenses, however, it could result in you paying more over the life of the loan.

Eligible Loans for Consolidation
• Direct Unsubsidized Loans (including Direct unsubsidized loans converted from TEACH Grants)
• National Direct Student Loans (NDSL)
• National Defense Student Loans (NDSL)
• Subsidized Federal Consolidation Loans
• Auxiliary Loans to Assist Students (ALAS)
• Health Professions Student Loans (HPSL)
• Health Education Assistance Loans (HEAL)
• Federal PLUS Loans (for parents or graduate/professional students)
• Parent Loans for Undergraduate Students (PLUS)
• Direct PLUS Loans (for parents or graduate/professional students)
• Direct PLUS Consolidation Loans
• Nursing Student Loans (NSL)
• Loans for Disadvantaged Students (LDS)

What To Do If You Have Problems Repaying Your Student Loan
If you are having problems making your student loan payment, you should call your loan servicer/holder immediately. You may be eligible for a deferment or a forbearance.
